

LA BOTTE GARDIANE

SAVOIR-FAIRE D'EXCEPTION DEPUIS 1958

Fill in the fields below with the measurements indicated. These indications will constitute the basis for the manufacture of a model adjusted to your specificities.

Concerning the calf perimeter measurement, it is advised to consider it as accurately as possible. Once the pair is made, we can widen the tube of the boot, on the contrary if this one yawns we will not be able to tighten it. If you wish to insert your pants in your boots, check the corresponding box and we will adapt your measurements.

Do you wear your pants in your boots?

Yes No

MESURES EN CM	Pied gauche	Pied droit
1 - Desired height: from the ground to 4 cm below the knee bend maximum		
2 - Perimeter of the calf at its strongest point (If this one is superior to 40cm contact us)		
3 - Height from the ground to the strongest point of the calf		

1 - The height is measured barefoot and seated on a chair, knees bent at right angles. Position the tape measure vertically between the floor and the back of the knee. Indicate the height at which you want the model to arrive on your leg. The maximum height to provide us is 4 cm below the bend of your knee. Take this «desired height» measurement several times in order to refine your measurements.

2 - The calf circumference is measured with bare legs and sitting on a chair, knees bent at right angles. To be sure of the measurement, take the calf's dimensions at different points to choose the strongest point. If your calf circumference is greater than 40 cm, please contact us by phone or email.

3 - The height is taken barefoot and sitting on a chair, knees bent at right angles. Position the tape measure vertically between the floor and the place where your calf is the strongest (height at which you took the previous measurement), transfer this measurement in the table above.

4 - Compare your measurements with those of our standard models to confirm the need to make a custom fit. If your measurements are less than the measurements mentioned below, you can then opt for a standard model.
